

A New State-of-the-Art Overhead Protection System

Designed to protect the public & enhance the community

Since 1931 **Universal Builders Supply (UBS)** has been innovating overhead protection systems for construction and restoration projects of all sizes. Traditional overhead protection has a utilitarian look constructed of metal posts, braces, and plywood that can impede pedestrian traffic and obstruct visibility. Canopy was developed to meet evolving customer needs and combines form and function with aesthetics for a contemporary design that meets code and maintains structural integrity. By utilizing Canopy, an unsightly construction site can be transformed into an entirely different environment, creating a safer and more pleasant experience for everyone!

- Contemporary look & finish
- Variety of decking materials
- Colorful, customizable LED lighting
- Sturdy, open design
- Durable weather resistant finish
- Customizable signage

STURDY SUPPORT LEG DESIGN DECREASES THE NEED FOR MANY COLUMNS

RESIDENTS AND BUSINESS OWNERS APPRECIATE EASY ACCESS AND VISIBILITY

LONG SPANS CREATE WIDE OPEN SPACE FOR PEDESTRIANS

The community at large benefits from an appealing contemporary look that preserves the integrity of their neighborhood and business environment while keeping the public safe from falling debris.

THE DURABLE PAINTED FINISH WITHSTANDS WEATHERING, MAINTAINING A CLEAN LOOK

Landlords, Business Owners, and the Community Enjoy the Many Benefits of Canopy's Contemporary & Functional Design

DESIGN SPECIFICATIONS

With its capacity to sustain a heavy-duty 300 psf live load, Canopy qualifies as a NYC Heavy Duty Shed. This rating is the most stringent in North America, allowing Canopy to be deployed across the country. Canopy complies with all local regulations and is capable of supporting scaffolding. It is appropriate for use with new construction, facade restoration, and maintenance projects.

ENGINEERING & CONSTRUCTION

Canopy evolved through decades of providing protection systems to the construction industry. Our in-house engineering team developed Canopy's patented design and they manage quality control and on-site inspection of the final installation.

With its flexible design, Canopy meets the unique needs of a wide range of projects and a diverse group of customers, from development companies to landlords and business owners. Frame components are made from high-strength, lightweight aluminum. The four-layer painted finish is resistant to all weather conditions, allowing Canopy to maintain its clean appearance for extended periods of time.

LED ILLUMINATION, SIGNAGE, AND DECK CUSTOMIZATION

Canopy's proprietary color LED lighting system is customizable and offers enhanced safety and visibility for pedestrians at night.

The open mesh parapet is designed to accommodate custom signage and the deck construction is available in a variety of materials.
